WEDNESDAY, SEPTEMBER 18
11:00 AM – 1:00 PM

LIVE INDUCTION DEMO

Learn about induction cooking as we demo the product live!

Lunch & Learn: Kitchen Appliances that Add Flexibility & Function CEU Class

COURSE OVERVIEW

Findings from the 2023 NKBA's Design Trends Report pointed to the growing importance of function and flexibility in kitchen and overall home design. Homeowners are seeking order, flexibility, and breathing room in flowing floor plans and outdoor spaces. This course discusses the growing importance of outdoor kitchens, mudrooms, pantries, and spa-like suites, as well as how multigenerational living is changing household structures. Join us as we learn how these factors are influencing home design and a wide variety of uses for what are traditionally considered "kitchen appliances" but are indeed household appliances that can help add flexibility and function to these spaces.

Approved by AIA, ASID/IDCEC, NARI, NKBA, and PRO for 1 hr/1 LU.

LEARNING OBJECTIVES

- Identify kitchen design trends that maximize function and flexibility for homeowners
- Explore features and technologies homeowners are seeking in today's kitchen appliances
- Examine how induction and convection steam cooking appliances meet homeowner's desires for a healthier, more efficient cooking process while maximizing aesthetics
